(54) Title: DERIVING MOTION DETECTION INFORMATION FROM MOTION-VECTOR-SEARCH TYPE VIDEO ENCODERS

(57) Abstract: A method and apparatus for detecting motion from a digital video stream using MPEG (Moving Picture Expert Group) compression is provided. The MPEG encoder abstracts the relevant video motion data from the digital video stream (76) and estimates the amount of motion for each of the 16x16 macro-block of a current image frame and determines (92), from the estimated amount of motion, whether the current frame is a motion frame.
